GRANDER® FRESHWATER POOL SYSTEM

Pool Testing

Pool Shop Samples: Should be taken in the morning (7am to 8am).

Weekly: Self-testing of Chlorine levels is recommended where possible, using test strips.

Monthly: Testing should be done with a local pool shop, to ensure that water parameters remain in the correct range

The other tests, (below), are important to show up any abnormal readings. Pool shop tests required:

Free Chlorine, Total Chlorine, pH, Calcium Hardness, Alkalinity, Salt, TDS, Phosphate.

Pool Maintenance

Pool Adjustments

- Do not adjust pH using acid
- Do not use buffer to adjust alkalinity
- Do not use Cyanuric acid, (sunscreen)

Grander Rod Maintenance

The Grander Rod should be inspected every six months to ensure it has no staining, which can be caused by certain leaves or iron items e.g. hairclips.

Simply: use gumption or a similar cleaner to clean off the stain. No other maintenance is required.

Grander Pool Rod after the first six
months of use."*

GRANDER® FRESHWATER POOL REVIEWS

*Fiona (verified owner) –
19/09/2023*

We are really grateful we went for a Grander pool. We've had to do very little to keep our pool balanced and keep it fresh.

I definitely recommend Grander the amount of money you make up for in the lack of time you have to spend on it and the lack of chemicals and things you have to buy to keep your pool balanced so worth it.

Customer Reviews

Our pool water feels incredible on our skin! We went to a friends pool the other day and all came out with red eyes because we aren't used to the amount of chlorine that standard pools use. Grander was the best decision we made when building our pool!

*Mark Kroft (verified owner) –
01/09/2021*

Since installing the Grander we have gone from paying \$300-400 a month in chemicals in summer time to \$30 a month for liquid chlorine. I haven't had any trouble with the pool going green and I check it a couple of times a month.

The water doesn't smell like chlorine, very soft and better yet I don't get itchy when I get out. Still can't quite believe it's that simple and I don't have to replace it like I had to replace my salt chlorinator every 5 years.

If I could give 100 star rating I would! Wayne and the team from Grander water have exceeded all expectations. Wayne has educated me on the philosophy of the grander system and has gone above and beyond in his customer service helping in every aspect. We have the grander freshwater system in our new pool. The water is perfect!

My youngest daughter has allergies and the water has been so great on her skin.

*Knowing there are no nasty chemicals brings me peace of mind and as an added bonus our skin and hair feels great! I'm so thankful to have chosen this system and to have Wayne's vast expertise, fantastic customer service and genuine care of his customers health.
Thank you so much Grander team.
I would highly recommend this system and this company. Kind regards Kardina*

08/03/2022*

Really happy with our grander pool. After 2 years and lots of mud in our pool from heavy rain and flooding it costs us \$30 to fix it compared to our mates who pay \$300 plus in chemicals to fix theirs. Support is great Wayne is a champ.

FREQUENTLY ASKED QUESTIONS

How does the Grander Freshwater System work?

The Grander Rod creates more available oxygen similar to a reed bed pool, where plants and bacteria keep the water clean. The Grander Rod is just a smaller version creating healthy bacteria to keep your pool water crystal clear, with no added chemicals and minimal maintenance.

What are the runnings costs of the Grander Freshwater Pools?

With reduced pumping times, and only adding one or two bags of salt per year (for an average pool) the costs are minimal.

Do Grander Freshwater Pools use copper rods?

No, Grander Freshwater pools do not use Copper Rods, the Grander Rods are made from stainless steel and do not use electricity or have any moving parts. This means they will last indefinitely.

Why don't you have to shower after swimming in a Grander Freshwater Pool?

A Grander Freshwater Pool is totally chemical free with no smells or tastes and with very little salt added, so there is no salt or chemical residue to wash off.

Why do customers report no skin or eye irritations after using a Grander Freshwater Pool?

A Grander pool is a biological pool and the water finds it's own natural level of pH (approx 7.6 to 7.8) without the use of acids and buffer. There is also no added chemicals to irritate the skin or eyes.
